Laser Guided Scraper
Systems From LEON

JUNE 2011

LEON 'Hits the Bullseye' With New Laser Guided Systems

Are you looking for smarter ways to reclaim and reshape your valuable land? Let LEON take the guess work out of land levelling for you. The benefits of laser guided land levelling equipment for farmers, contractors, and rural municipalities are numerous.

For farmers, fields that are not level generally have uneven crop stands, increased weed burden and uneven maturing of crops. All of these issues can undoubtedly lead to reduced yield and poor grain quality.

To combat this, LEON works with farmers to offer the best available tools to accurately level and drain their fields properly. Recent research shows that an effective laser system can help make land levelling easier and less expensive than alternative methods.

Apache Bullseye 3+
Laser Receiver

Generally, a complete laser system from LEON includes one receiver which is mounted on a measure stick and another mounted directly on the cutting edge of the scraper.

In years where moisture is scarce, a well designed landscaped field can help to save 25-30 per cent of rain water that otherwise would be lost to 'unevenness' in the field.

In years where moisture is excessive, a LEON laser guided scraper will precisely calculate and cut a consistent grade to help with field drainage. Only the LEON system offers a "completely automated" and self adjusting method when in operation. This helps even the most inexperienced operator hit the mark every time.

Laser assisted road building and municipal land levelling is also made easier with GPS-Assisted technology.

Call LEON today for complete information on laser guided pull scraper and land scraper systems.
